

# INSTALLATION DRAWING GASOLEC G12 HEATER

**Installation height H-1:** we recommend an open space above the G12 of 100cm or more. (60cm is the minimum and this is for a non-burnable ceiling only!)

**Installation height H-2:** we recommend installing the heaters 130-160cm from the ground. If the heaters are higher, they will cover a larger area. For colder conditions we would install the heaters lower.

**Note:** do not install the heaters under a gas pipe

**Note:** a gas hose should never be above or under a gas heater!

**Note:** Each heater should be attached to the roof with 2 chains.
