

INSTALLATION DRAWING GASOLEC M8 HEATER

Installation height H-1: we recommend an open space above the M8 of 100cm or more. (60cm is the minimum and this is for a non-burnable ceiling only!) **installation height H-2:** we recommend installing the heaters 90-150cm from the ground. If the heaters are higher, they will cover a larger area. For colder conditions we would install the heaters lower. **Angle E=** check installation manual. **D** is spacing < 7m, depending on the conditions.

Notes:

- do not install the heaters close under a gas pipe!
- a gas hose should never be above or under a gas heater.
- Each heater should be attached to the roof with 2 chains.
